

KENYAN ECONOMY EDA ANALYSIS

Eugene Maina

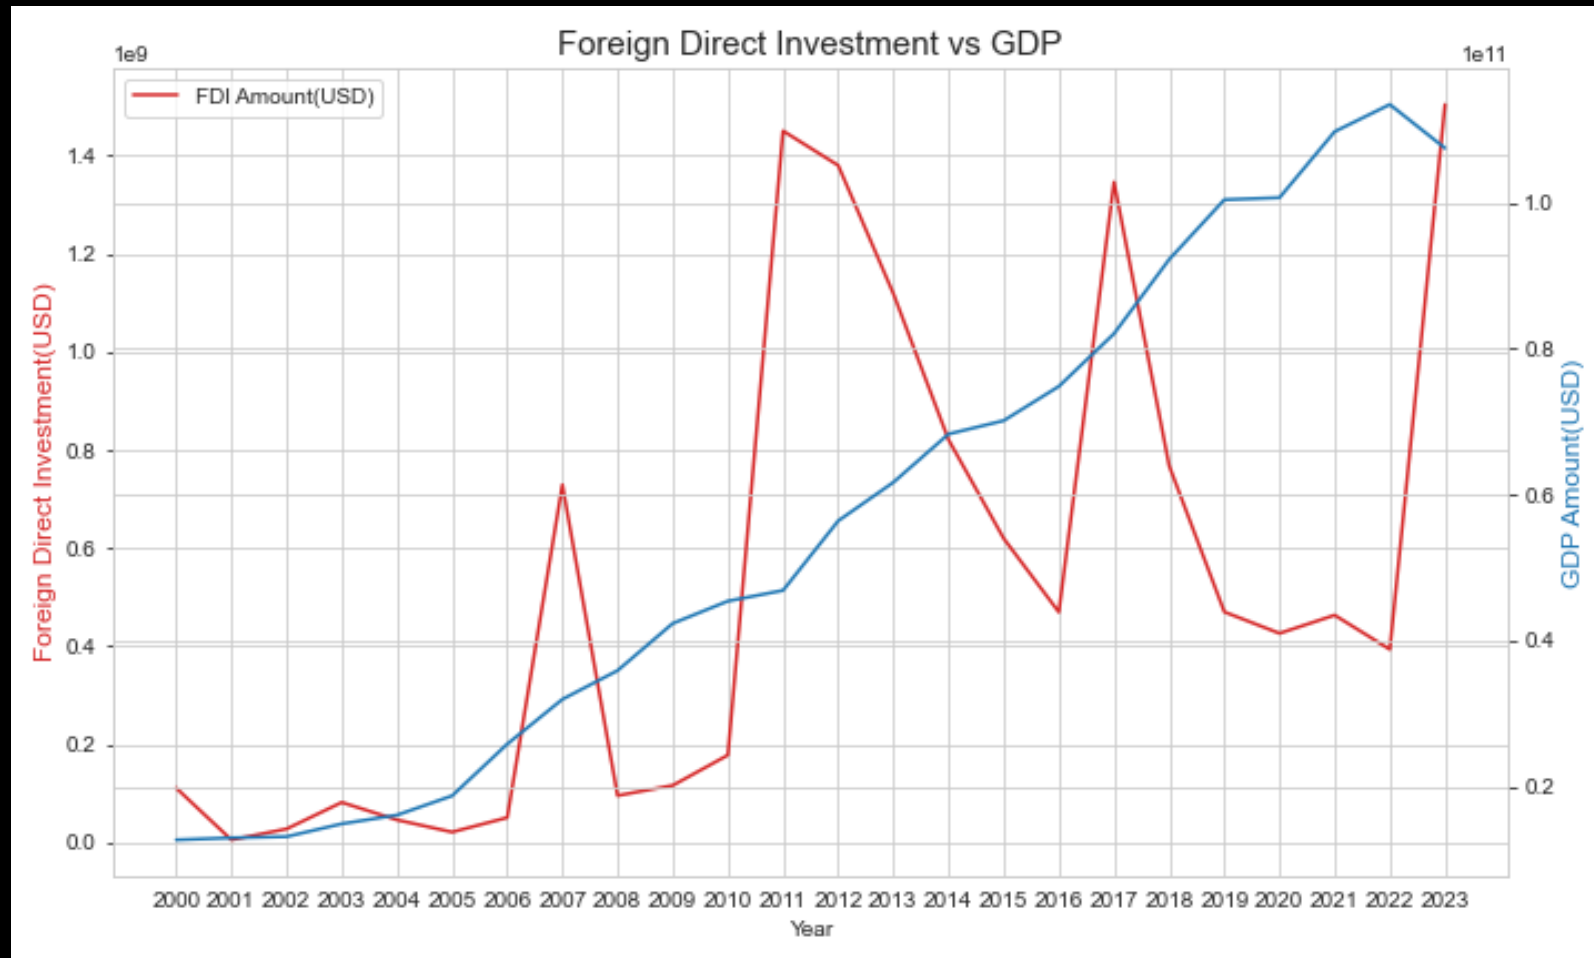

OVERVIEW

- A descriptive analysis on the performance of the Kenyan Economy from the start of the century (The Year 2000)
- The objective of this study:-
 1. Assess the performance of the economy to guide economic policy making decisions
 2. To make a case for Foreign investment attractiveness.
 3. To analyze quality of life for residents in the country
 4. To look at the performance of the manufacturing sector and its effects on the terms of trade

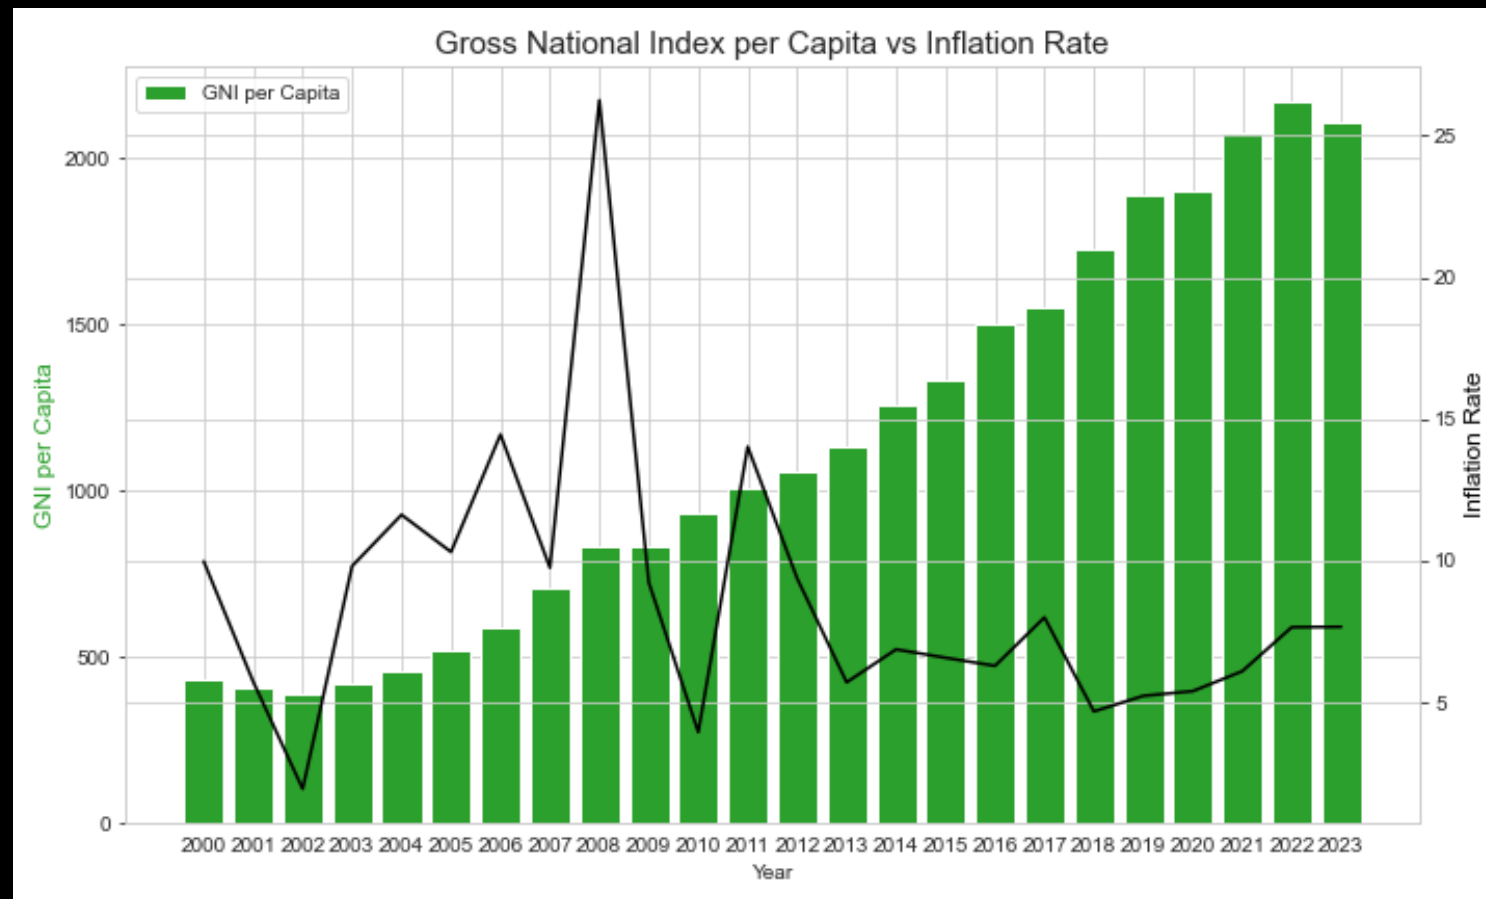

DATA AND METHODS.

- Data that is used for the project are .csv files obtained from the website:
macrotrends.net
- Analyzed key economy metrics such as GDP, GNI, Inflation rate, FDI, Terms of Trade and Manufacturing Output
- Limitations to the data is the lack of current day statistics

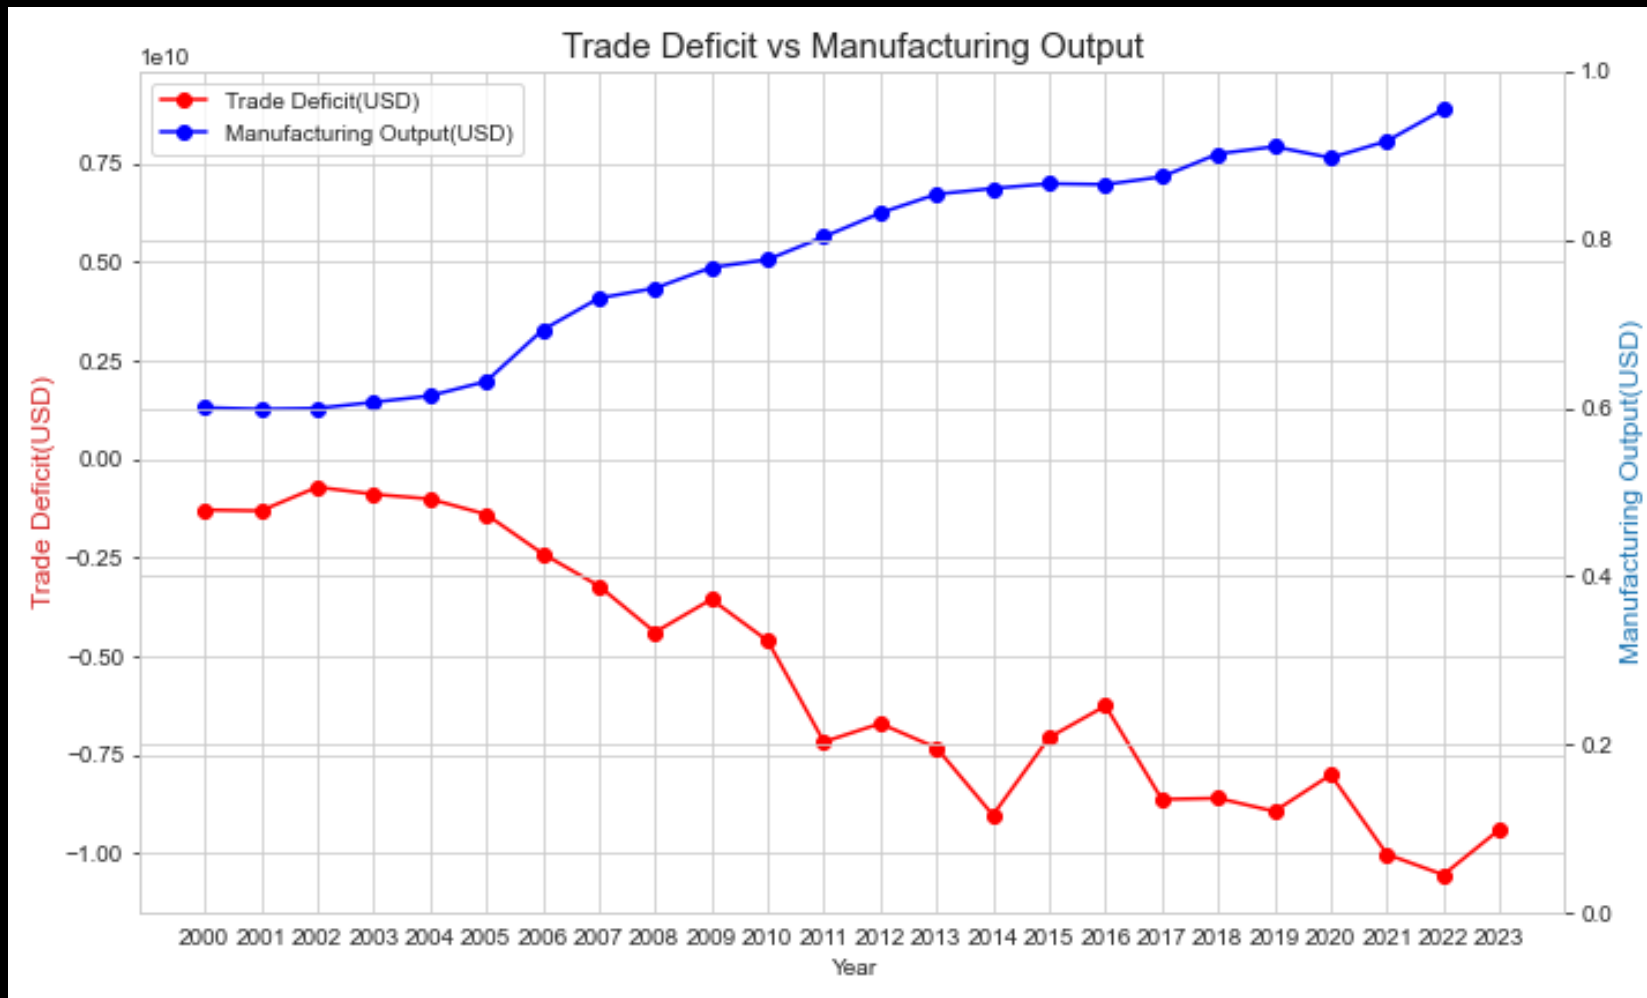

RESULTS

RESULTS

RESULTS

ANALYSIS

- FDI has no real effect on GDP growth.
- Inflation stabilized from the year 2013
- Residents income have increased over time
- Manufacturing output has strong negative correlation with trade deficit

RECOMMENDATIONS

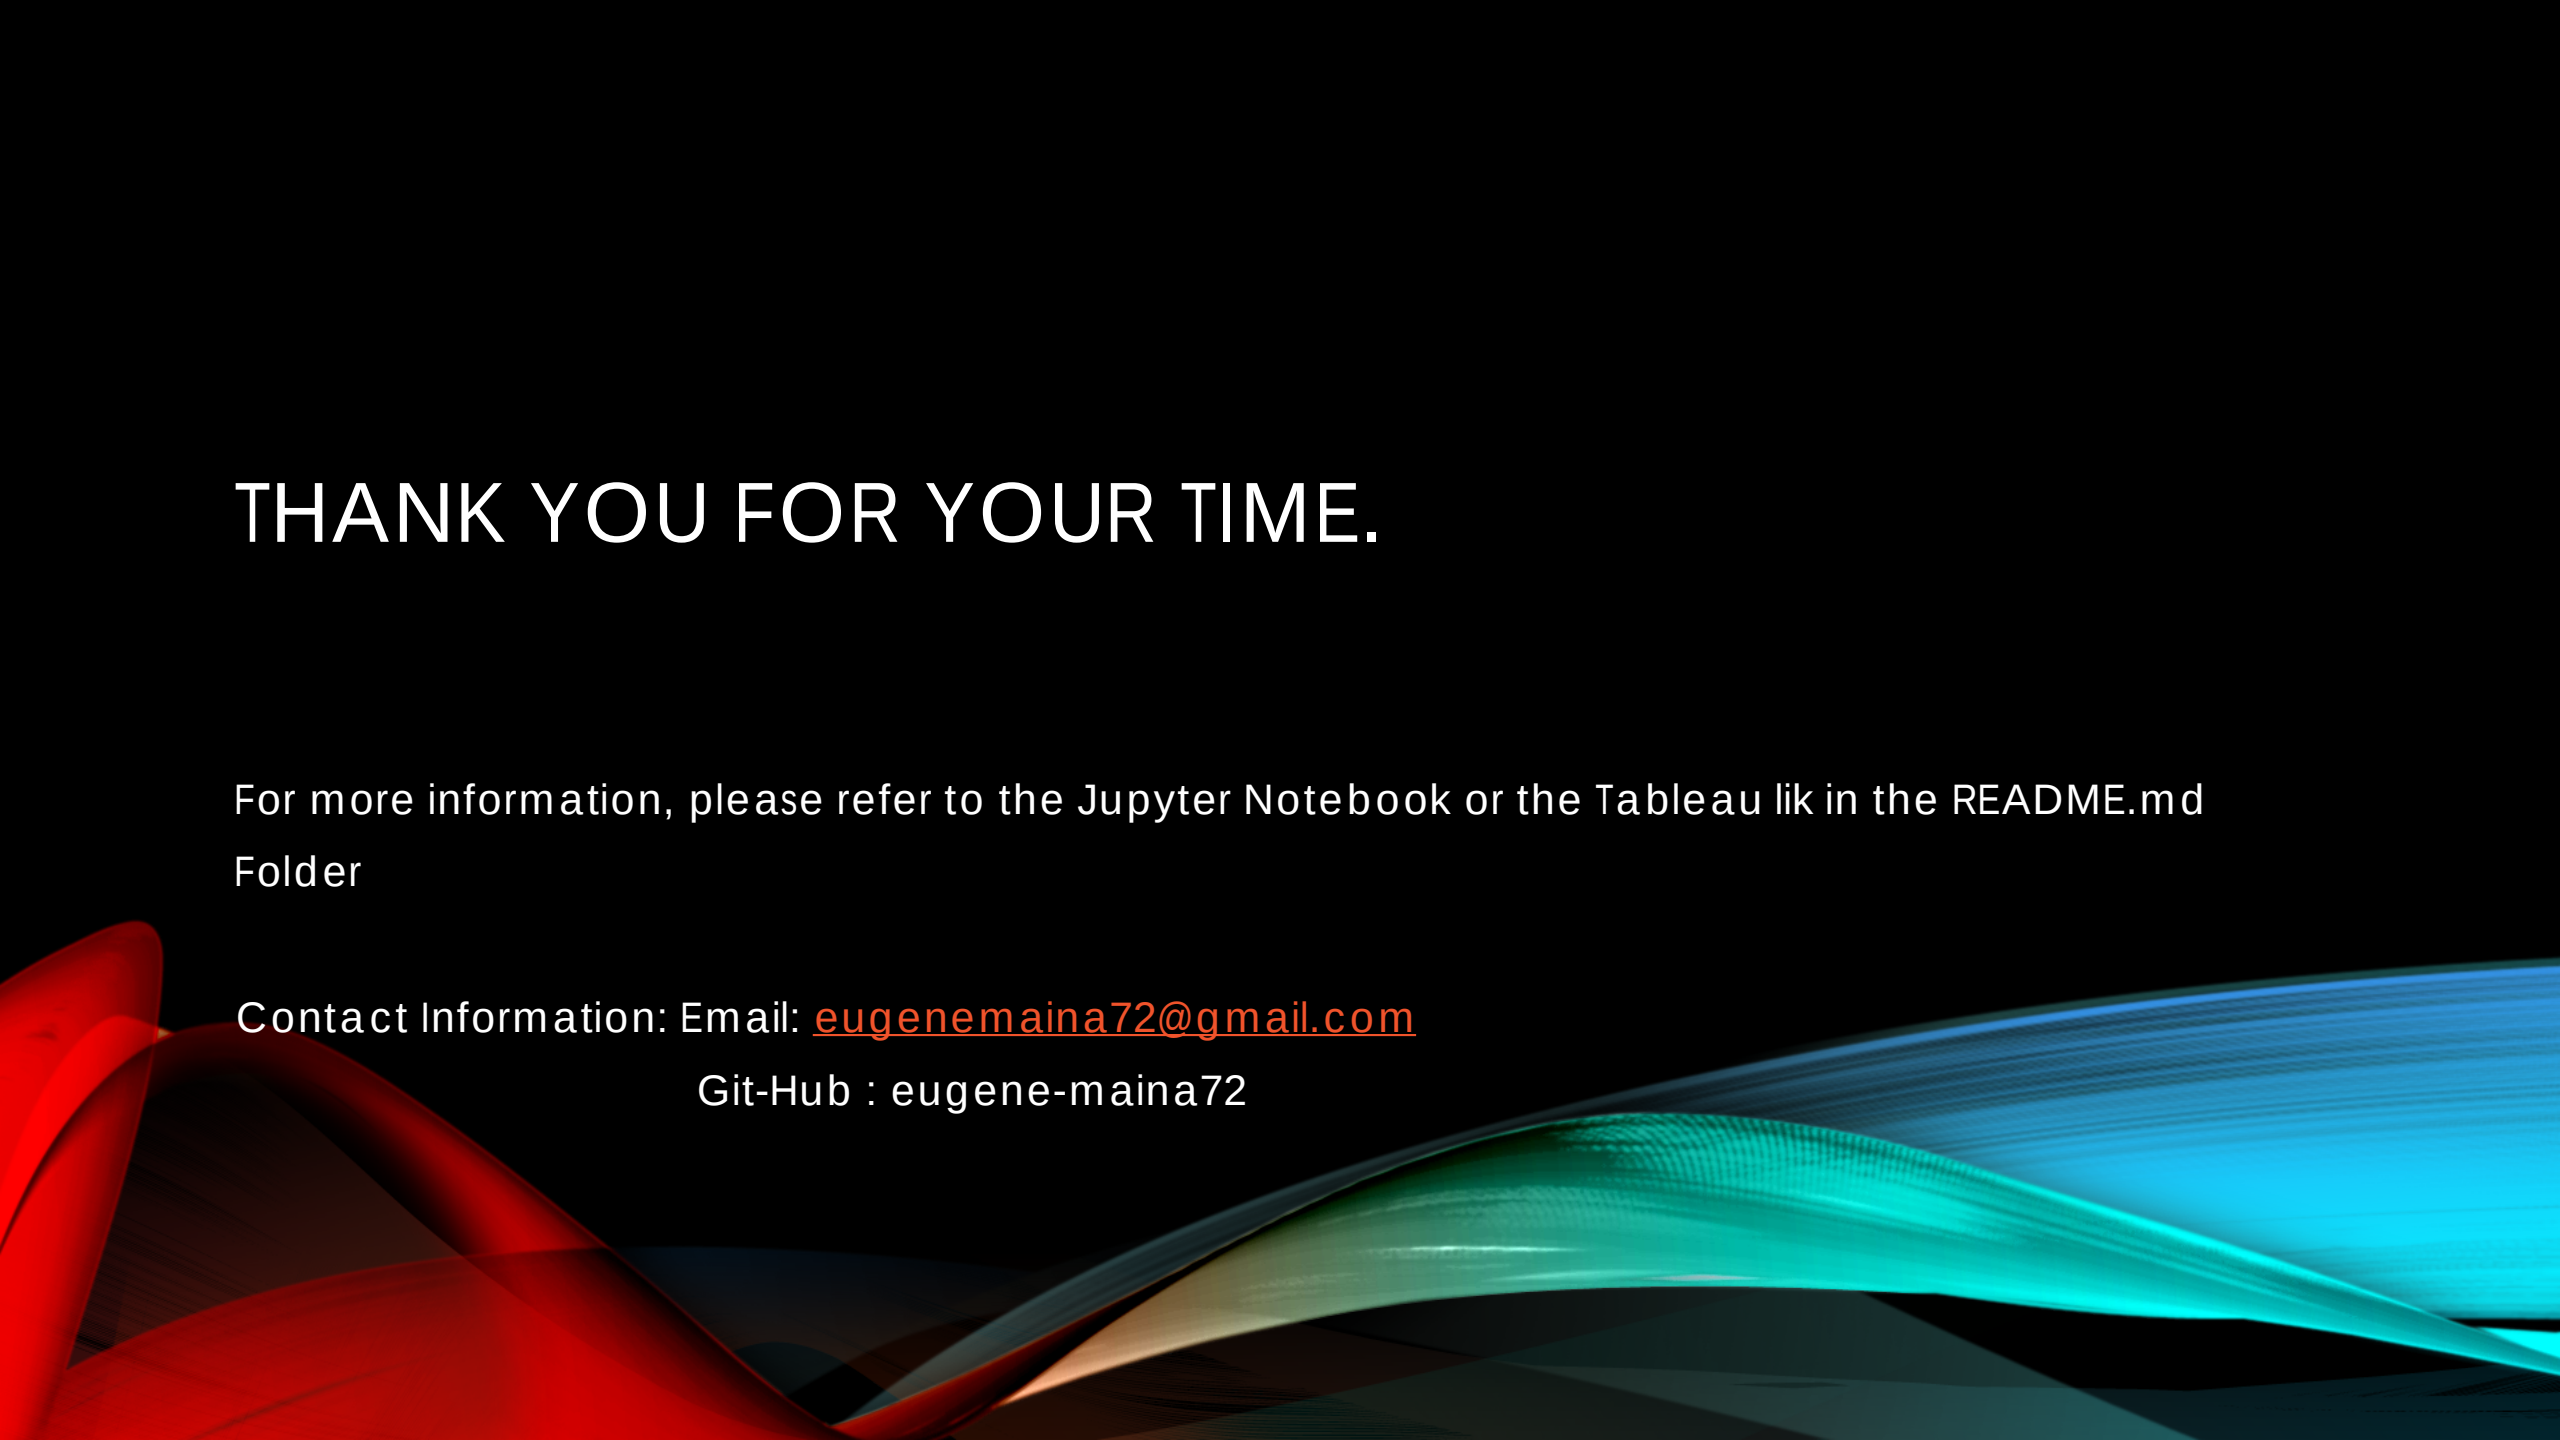

- Foreign direct Investment should be encouraged
- Government should incentivize manufacturing industry investment
- Sustainable economic development plans should be put in place by the govt.
- Price controls and subsidies should be put in place to control inflation

The background of the slide features abstract, flowing waves in shades of red and blue, creating a dynamic and modern aesthetic. The waves appear to be made of a translucent, liquid-like material, with the red waves on the left and the blue waves on the right, both curving and flowing across the frame.
